

Futurebox

at DTU Science Park

Break the Barriers. Build the Future.

We are the leading hardware and deep tech startup incubator and accelerator, supplying new deep tech and hardware technology to future industries.

Futurebox is the co-working space, incubator and accelerator for **hardware and deep tech startups** and university spinouts. Futurebox is located at the DTU campus, in its own purpose-built space and is dedicated to helping tech startups bridge the gap from idea, over prototyping, to market entry and established business.

At Futurebox, startups are inventing and building the future in hardware technology. Walk into our brand-new building at DTU campus and you'll see entrepreneurs working at the frontiers of Internet of Things, MedTech, CleanTech and other research based technologies.

The corporate collaboration

At Futurebox we believe that hardware startups need corporate partners to grow their technology to fit industrial and commercial needs - as well as much as the established industry need agile startups to access new and ground breaking innovation and inspiration.

Fueling collaboration between startups, corporations and industry to enhance business and technology development is a highly successful approach to innovation and is the cornerstone in all our work.

Futurebox accelerators

We tailor programs specialized in helping founders make the leap from early startup to established business. Take till example **Danish Tech Challenge** - our intensive - and highly successful accelerator program for ambitious hardware startups in Denmark. Each year we handpick 20 startups to participate in a four-month development program. The startups bring an idea, a strong team, a prototype and passion, and we supply business insights, expert advisory, workshop space, access to investors, and much more.

Ask yourself

"What If" ?

-and **imagine.**

Then ask yourself

"Why Not"?

-and go **BUILD.**

Do **you** dare to break the box?

Future**box**

at DTU Science Park

We are bridging the gap

Our program specializes in helping founders make the leap from early startup to established business and. We provide targeted structure and support.

For startups joining **Futurebox**, we provide:

- The only workspace and incubator dedicated to hardware and deep tech in Denmark
- A highly engaged community dedicated to hardware and technology
- Business model and business development guidance
- Participation in acceleration programs
- Branding and exposure on Futurebox' platforms and marketing materials

- Access to investors, venture capital and other funds
- Access to experienced corporate and industry partners within deep tech and hardware development
- Access to prototyping workshops (3D printers, laser cutters, various electrical tools etc.)
- Sparring and connection with researchers from DTU
- Team Mentoring program for startups powered by MIT
- Technical support for product and technology development in the workshops
- Network building, access to weekly events and activities in Futurebox
- Open offices, offices, meeting rooms, kitchen and coffee

Immerse yourself into an intense startup community of like-minded hardware hackers and deep tech entrepreneurs.
